Please use the Q&A function to type questions or comments during the presentations.
Use the raise hand function if you would like to speak during the question and comment period at the end of the meeting.
Agenda Overview

6:00 p.m.  Welcome
6:05 p.m.  Watershed Restoration Plan Overview
6:10 p.m.  Updates from Technical Working Group
6:20 p.m.  Agricultural Cost Share Programs
6:30 p.m.  Engineering Active Water Management
7:15 p.m.  Question & Comment Period
7:30 p.m.  Adjourn
Welcome

Bill Rich, Hyde County Economic Development
Lake Mattamuskeet Watershed Restoration Plan

Michael Flynn, North Carolina Coastal Federation
In 2017, a partnership was formed to develop a watershed restoration plan.
Plan Goals

Protect the way of life in Hyde County:

Maintain existing land uses and industries in the watershed (residential, farming, fishing and tourism) and enhance and maintain the health of the lake’s natural resources (waterfowl and wildlife).
Plan Goals

Actively manage the lake water level:

Minimize flooding of residential, business, and farm properties. Allow for annual drawdowns as appropriate and in compliance with the Refuge’s management objectives defined in its Comprehensive Conservation Plan to establish and maintain submerged aquatic vegetation within the lake, and to establish and maintain a zone of emergent vegetation around the lake periphery.
Plan Goals

Restore water quality and clarity:
Reduce nutrients, sediments, and phytoplankton blooms, promote the growth of submerged aquatic vegetation and remove the lake from the NC 303(d) list of impaired waters.
Desired State of the Lake and Watershed

1. Active management of lake level in addition to tide gates
   • Less frequent flooding of residential property
   • Fewer septic system failures & adequate drainage of croplands
2. Clear and mesotrophic water (moderate nutrient levels)
   • Fewer phytoplankton & cyanobacteria blooms
3. Increased SAV abundance along lakebed
4. Increased emergent vegetation
5. Reduced common carp populations
6. Increased game fish and blue crab populations
7. Removal from the NC 303(d) list of impaired waters
   • Chl-α, pH, and turbidity within federal and state guidelines
Priority Actions

• Create a formal body that provides managing authority for active water management within the watershed in close coordination with the Refuge, which would be excluded as party to the formal body since USFWS cannot cede management authority.

• Perform hydrologic study of the watershed.

• Design engineered plans for active water management within the lake watershed
  ▪ Infrastructure Improvements
  ▪ Additional Outlet Evaluation
  ▪ Potential Sheet Flow Sites
Implementing the Watershed Restoration Plan

- Pursuing funding to implement the priority management actions has been the focus of partners over the past year.

- **Funding awarded from:**
  - Clean Water Management Trust Fund
  - N.C. General Assembly
  - National Science Foundation
REQUEST FOR QUALIFICATIONS:

ENGINEERING ACTIVE WATER MANAGEMENT WITHIN THE LAKE MATTAMUSKEET WATERSHED

HYDE COUNTY, NORTH CAROLINA

Issued by the
NORTH CAROLINA COASTAL FEDERATION
in partnership with
HYDE COUNTY
and
EAST CAROLINA UNIVERSITY

APRIL 15, 2020

Geosyntec Consultants
and
Coastal Protection Engineering (CPE)
selected as the engineering firm
Stakeholder Team

Bill Rich - Hyde County Economic Development
Daniel Brinn - Hyde County Water and Flood Control
Rebekah Martin – U.S. Fish and Wildlife Service
John Stanton – U.S. Fish and Wildlife Service
Kendall Smith - U.S. Fish and Wildlife Service
Wendy Stanton – U.S. Fish and Wildlife Service
Doug Howell - N.C. Wildlife Resources Commission
Michael “Slim” Cahoon - Farming Community
Wilson Daughtry – Mattamuskeet Association
Andrea Gibbs – NC Cooperative Extension
Art Keeney - Residential Community
Ben Simmons - Farming Community/Fairfield Drainage
Pat Simmons - Hospitality Industry
J.W. Spencer - Hyde County Soil and Water Board
James “Booboo” Topping - Residential Community
Joey Ben Williams - Impoundments
MEMORANDUM OF UNDERSTANDING

Between
NORTH CAROLINA WILDLIFE RESOURCES COMMISSION
And
COUNTY OF HYDE, NORTH CAROLINA
And
U.S. DEPARTMENT OF THE INTERIOR,
U.S. FISH AND WILDLIFE SERVICE

I. Authority:

This Memorandum of Understanding (MOU) is entered into between the Department of the Interior, U.S. Fish and Wildlife Service (herein after referred to as the Service), the North Carolina Wildlife Resources Commission (hereinafter referred to as the Commission), and the County of Hyde, North Carolina (hereinafter referred to as the County) pursuant to the legal authorities vested to the agencies.

Specifically to the Service under the authority of the:

- National Wildlife Refuge System Administration Act of 1966, as amended by the National Wildlife Refuge System Improvement Act of 1997. This Act defines the National Wildlife Refuge System, establishes the responsibilities of the Secretary of the Interior for managing and protecting the System, and establishes the legitimacy and appropriateness of the six priority public uses.
- Refuge Recreation Act of 1962 (16 U.S.C. § 460k et seq.). This Act allows the use of refuges for recreation when such uses are compatible with the refuge’s primary purposes and when sufficient funds are available to manage the uses.
- Fish and Wildlife Act of 1956 (16 U.S.C. 742 et seq.). This Act grants the Secretary broad authority to “take such steps as may be required for the development, advancement, management, conservation, and protection of fish and wildlife resources. . . .” The statute specifically authorizes the acceptance of gifts and the services of volunteers for programs and projects that benefit the mission of the U.S. Fish and Wildlife Service. Further, the act specifically authorizes the Secretary to enter into cooperative agreements for programs and projects to benefit specific units of the National Wildlife Refuge System.

Specifically to the Commission under the authority of North Carolina § 143-239 (1947) which enables the Commission to enter into cooperative agreements:

... the Commission is hereby authorized and empowered to enter into cooperative agreements pertaining to the management and development of the wildlife resources with federal, State, and other agencies, or governmental subdivisions.

Purpose

The Service, the Commission, and the County individually and collectively have major responsibilities for management and protection of the watershed surrounding Lake Mattamuskeet.

In consideration of the mutual benefits to be derived, the agencies agree to cooperate and collaborate to achieve mutual and individual agency goals and objectives identified in the Lake Mattamuskeet Watershed Restoration Plan.
Review the Plan and Addendum

Restoring the Lake Mattamuskeet Watershed

Lake Mattamuskeet Watershed Restoration Plan

Lake Mattamuskeet, the largest lake in North Carolina, is a vital part of Hyde County's amazing natural and cultural heritage. Coastal residents and visitors alike value this national treasure.

However, declining water quality and elevated water levels are threatening the future of this natural wonder. In 2017, Hyde County, N.C. Wildlife Resources Commission, and the U.S. Fish and Wildlife Service formed a partnership and contracted the Coastal Federation to develop a watershed restoration plan. This plan aims to address both poor water quality within the lake as well as chronic and persistent flooding on the surrounding landscape.

The partners embarked on a 18-month planning process that involved stakeholder and public engagement, and on August 7, 2019 the Lake Mattamuskeet Watershed Restoration Plan was officially approved by the N.C. Department of Environmental Quality. Since then the partners transitioned from developing the plan, to implementing the plan. In 2020, three grants were awarded from state and national funders to advance the implementation of the Lake Mattamuskeet Watershed Restoration Plan.

The goals of the plan are to:

- Protect the way of life in Hyde County;
- Actively manage the lake water level; and
- Restore water quality and clarity.

The grant awards allow the partners to advance several of the priority management actions for the watershed. Throughout 2020 and 2021, the partners will host a series of public meetings and seek input on different implementation ideas.

Updates from Mattamuskeet
Technical Working Group

Wendy Stanton, U.S. Fish and Wildlife Service
Doug Howell, N.C. Wildlife Resources Commission
Updates for Carp Removal Project

Communication & Outreach:

• Compliance documentation has been completed (compatibility determinations, NEPA including 30 day public review, etc...)

• Information bulletin about the Carp Removal Project has been published by local newspapers on August 30, 2021.

• The Coastal Review will be publishing an additional article their next issue.
Updates for Carp Removal Project

Congressional Support:

• Congressman Dr. Murphy supports the project.

Greenville, N.C. — Rep. Greg Murphy, M.D. (NC-03) released this response following the news that Mattamuskeet National Wildlife Refuge and the North Carolina Wildlife Resources Commission have been awarded a $1 million dollar grant to remove invasive Common Carp from Lake Mattamuskeet. This grant was awarded by the U.S. Fish and Wildlife Service’s Large Invasive Species grant program and will go into effect in FY2023.

“I am glad that we are receiving this grant to remove common carp from Lake Mattamuskeet,” said Murphy. “Lake Mattamuskeet is the largest naturally-formed lake in North Carolina, and has been a wonderful landmark for Hyde County residents and visitors over the past 200 years. As such, it is critical that we provide necessary resources to protect and conserve the landscape and improve water quality for wildlife. Removing harmful and invasive species from Lake Mattamuskeet is part of a larger Watershed Restoration Plan that aims to better water management and increase lake vegetation coverage, as well as address persistent flooding in the surrounding area. I applaud our community efforts to keep Eastern North Carolina beautiful for years to come!”
Updates for Carp Removal Project

• Local signage

Lake Mattamuskeet Aquatic Grass Restoration

Carp gates are in place to keep invasive Carp out of the Lake and improve aquatic grasses in the lake. Native fish and crabs can enter the lake. Please call the refuge for more details.

WATER WARNING

Harmful Algal Bloom Advisory

Cyanobacteria (blue-green algae) can produce toxins that can cause serious illness in animals and humans.

• Harmful algae may not be visible, but it’s present in Lake Mattamuskeet.
• Avoid contact with water and wash skin immediately.
• Do not drink the water.
• Keep children and pets away from the water.
• Animals may die after drinking water or eating shoreline algae containing toxins.

Contact your doctor if you or a family member experience sudden or unexplained illness.

Contact your veterinarian if your pets experience sudden or unexplained illness after exposure to potentially harmful algae.

For more information, visit the CDC website: www.cdc.gov/hab/cyanobacteria
If you have questions, please call the refuge office at (252) 926-4021.
Updates for Carp Removal Project

Carp barriers are working at the tide gates!

Video credit NCWRC Fisheries Biologist Kevin Dockendorf
Updates for Carp Removal Project

Carp barriers are working at the tide gates!

Video Credit NCWRC
Officer Robert Wayne
Updates for Carp Removal Project

Challenges: Debris buildup in front of carp barriers.

Carp barriers cut in half are easier to lift to flush debris.

Boom across canal helps direct debris for easier removal.
Updates for Carp Removal Project

Two new ECU Capstone Student Projects started in August.

1) Carp Deterrent Team: Senior Engineering Students: Travis Autry, Jackson Gardner, Hamza Omar Bhatti, Kenneth Blais, under Professor Dr. Sunhan Kim

2) Biosecurity Barrier Team: Senior Engineering Students: Tawana Warren, Kelcie Bennett, Nick Baldwin, Mohammed Issa Alzghbi, Tyler McRae House, under Professor Dr. Jeff Foeller
Updates for Carp Removal Project

Upcoming Team Actions:

Begin contacting local commercial fisherman for assistance with designing pound nets and other nets to use in the lake.

Considering a carp market analysis to identify markets locally and nationally.

Retrofit additional carp barriers (cut in half) to enhance debris removal.
Many thanks to all our partners and collaborators.
Agricultural Cost Share Programs

Cruise Gibbs, Hyde Soil & Water Conservation District
2021-2022 FISCAL YEAR FUNDS

- Agriculture Cost Share Program (ACSP) - $34,535

Engineering Active Water Management

Alessa Braswell, PhD, PE, Geosyntec Consultants of NC, P.C.
Engineering Active Water Management Updates

• Review study goals and objectives
• Review selected alternative
  – Gravity-drained canals to drainage districts
• Preliminary Engineering Design
  – Permit-level Plans
  – Environmental Impact Analysis
  – Active Water Management Plan
• Additional Bathymetric Surveys
• Next Steps
Study Goals and Objectives

• Develop H&H model
• Calibrate to Hurricanes Matthew and Joaquin
• Simulate calibrated model under various design storm scenarios in existing and future sea level rise
• Evaluate engineered options to actively manage lake levels during 10-year design storms
• Evaluate two alternatives for all design storms under existing and future sea level rise
• Progress one preferred alternative to permit-level plans
Selected Alternative: Gravity-Drained Canals to Drainage Districts

- Improve Jarvis Canal to Mattamuskeet Association
- Improve Burus Canal and Swindells Canal (adjacent to Oyster Nest Campground) to Fairfield District #7
- Draw down lake using adjustable water control structure
- Upgrade pump capacity at drainage districts to handle additional volume
Preliminary Engineering Design

- Permit-level Plans
  - General (2 sheets)
  - Site Plan (1 sheet)
  - Civil (7 sheets)
  - Process (4 sheets)
  - Mechanical (2 sheets)
- Preliminary Ecological Impact Analysis
- Preliminary Water Management Plan

Preliminary Engineering Design: Pump Stations

- **Pump Station Siting**
  - All locations can be either powered by diesel generators or three-phase power (with power line extension ranging from 0.75 miles to 2.75 miles)

Discharge locations could utilize surrounding land for sheet flow application

Discharge to Mill Ditch or Simmons and Williams properties

Discharge to Gull Rock Game Land Carter Tract

Discharge to WRP land then Refuge land
Preliminary Engineering Design: Pump Stations

- Example Piping and Instrumentation Design (P&ID)
Preliminary Engineering Design: Ecological Impact Analysis

• Narrative of project, including need for project and new service provided to project
• Location Map
• Summary of alternatives screening rationale
• Summary of anticipated permits (e.g., Section 404 Individual Permit, CAMA Major Permit)
• Review of publicly available data sets
• Summary of changes to environmental features: water volumes, rates, and salinity

RESULT: An opinion of potential adverse impacts and known informational gaps.
Preliminary Engineering Design: Active Water Management Plan

• Narrative of conceptual design
  – Summary of components of design (grading, water control structures, pump sizing, etc.)
  – Brief description of construction methods

• Engineer’s Opinion of Probable Cost
  – Class 5 Capital Construction costs
  – Annual operation costs

</tbody>
</table>

Assumptions: 48-inch axial flow pumps (maximum capacity of 60,000 gpm @ 250 hp each). Assumed to be fueled by diesel generators running at full load. Annual costs include fuel consumption at specified hours of operation/year + 5% of capital pump/generator/water control structure costs on an annual basis for maintenance + 5% contingency for replacement costs every 20 years.
Additional Topo/Bathy Surveys

• Proposal to collect additional topographic and bathymetric surveys, beginning with Outfall Canal with combo of RTK GPS and rod & level methods

• Refine DEM and model grid along canals & refine estimated quantities of volume for removal to return to original design dimension

• Cross sections at approximately 1,000 – 2,000 ft intervals (exploring options for reducing span between cross sections)
Next Steps

• Finalize plans, EIA, and design narrative
• Potentially collect additional bathymetric data to improve cost estimates for sediment removal in existing outlet canals, pending funding
• Finalization of service district boundary, potentially with additional bathymetric data
Schedule Update

- Some schedule delays due to evolving scope to improve analysis (additional alternatives analysis, costs analyses) and processes for approval and decision-making on next steps (Hyde BOC meetings, etc.)

- Started project in June 2020

- Delivered H&H report, Wetland Siting, and Conceptual Costs in June 2021

- Draft of Plans submitted September 14, 2021

- Submit draft of Ecological Impact Analysis in early to mid October

- Submit narrative and final permit-level plans, and service district boundary in late October 2021

- Additional topo/bathy data collection and model and cost estimate refinement?

- Received approval at Hyde County BOC (6/21)

- This meeting (9/27)
